

ProFIT Program

Wholesale Renewable Generation

What is ProFIT?

ProFIT is Sonoma Clean Power's (SCP) Feed-In Tariff, a renewable energy purchasing program which sets the rules and price for the purchase of electricity from small-scale wholesale renewable electricity projects within SCP's service territory.

Summary

This program directly promotes the development of small-scale renewable generation installations within the Sonoma Clean Power service territory by creating a standard-offer transaction with a fixed price and contract length.

Base Price: \$0.095/kilowatt-hour (kWh) [\$95/MWh] for the duration of the contract term.

Bonus Incentives: Bonuses are paid out for the first five (5) years of the contract. Project may opt to receive the bonus payout at half the bonus amount over ten (10) years.

Small-scale projects of 250 kW or less	+ \$0.005 / kWh [<i>\$5/MWh</i>]
Previously developed site locations	+ \$0.01 / kWh [<i>\$10/MWh</i>]
Local business	+ \$0.01 / kWh [<i>\$10/MWh</i>]
Training Incentive	+ \$0.01 / kWh [<i>\$10/MWh</i>]

Contract Term:

- 10 years for Baseload Generating Facilities (e.g. biomass facilities)
- 20 years for As-available/Other Generating Facilities (e.g. solar/wind facilities)

Eligibility Criteria

Projects must be:

- A new resource
- Small-scale (smaller than 1 megawatt)
- Located in SCP service territory
- California Renewable Portfolio Standard compliant
- Interconnected to the electricity grid via PG&E's Wholesale Distribution Tariff (WDT)
- Legally permitted by appropriate jurisdictional agency, and
- Willing to sign a standard, non-negotiable, long term contract.

Timing

Applications will be accepted until program is fully subscribed.
