

# Advanced Energy Build

For Developers and Production Home Builders

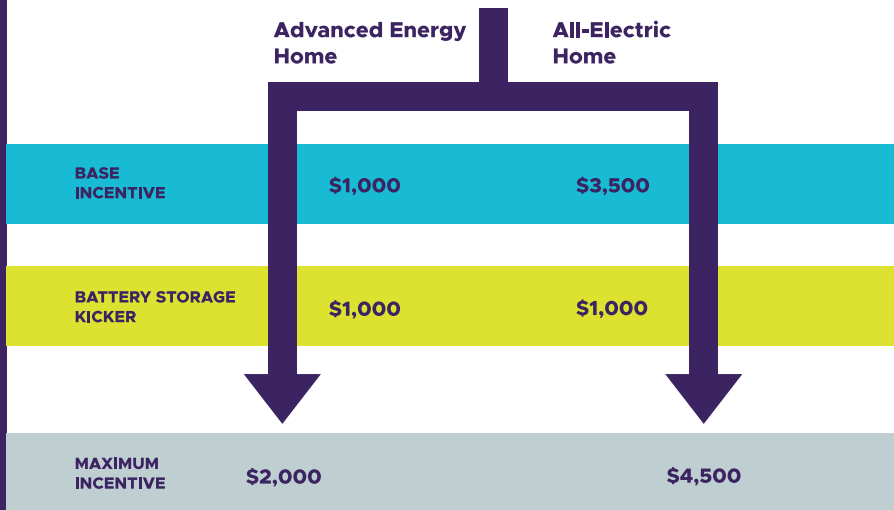

Advanced Energy Build is designed specifically for Developers and Production Home Builders. As more communities adopt all electric REACH codes, let Sonoma Clean Power help offset some of the costs through our Advanced Energy Build incentive program. Builders can receive cash incentives up to **\$4,500** per unit for high-efficiency and all-electric single-family and multi-family developments in Sonoma and Mendocino Counties.

SCP has developed and will pay for Builder Resources to help sell your new, high performance homes including:

- Co-branded banners to use on site during construction
- Welcome packets for homeowners explaining the benefits of their new, efficient appliances
- Signage you can use in your model homes to explain high efficiency equipment

Through Advanced Energy Build, SCP offers a partnership to bring highly efficient homes to your community, affordably.

We invite you to talk to us to find out if Advanced Energy Build is a good fit for your development.

## Flexible Building Incentives

- Developers can receive cash incentives of \$3,500 for All-Electric Homes that have a Delta EDR of 1.0 and install an EV charger.
- Developers that aren't ready to build all-electric, can still receive \$1,000 incentive for pre-wiring for electrification, achieving a Delta EDR of 1.0, and installing an EV charger for an Advanced Energy Home.
- Both options will get you an additional \$1,000 incentive for installing a battery storage system.
