

Community Outreach Program Guidelines

rev. 01/2019

Sonoma Clean Power (SCP) is proud to serve our communities by delivering on our Mission of providing cleaner energy at competitive rates and promoting local solutions to climate change for customers throughout Sonoma and Mendocino counties.

We seek to support our Mission and positively impact our communities through contributing our time, our expertise, through financial sponsorships, and by providing leadership to organizations and efforts that support our program goals, which include:

- Greenhouse Gas Reductions and Climate Solutions
- Local Schools/Education (with an emphasis on STEM programs)
- Basic Needs (food, housing, family support services, etc.)
- Partnering with our Service Territory's Business Community, Including our Region's Key Industries/Key Economic Drivers
- Create Visibility/Awareness for Sonoma Clean Power

We meet our program goals through a combination of sponsorships and memberships, volunteerism, in-kind donations, accepting speaking invitations and by participating in a variety of community and business events and groups, including serving on Board of Directors.

SCP is a local, not-for-profit public agency which strives to meet these commitments through thoughtful and balanced planning. We create our Community Outreach plan each January, for implementation the following fiscal year. While we consider requests for support throughout the year, the majority of efforts and support are determined during our planning process.

Requesting Support from SCP

Interested non-profit, community and business groups can submit requests for support by completing a Request for SCP Community Support form.

We will evaluate each request carefully against available budget and other resources, our primary areas of focus and program guidelines/goals, and will respond to requests in a timely manner.

These guidelines will be evaluated annually and are subject to change, to ensure consistent alignment with the Agency's goals.

Thank you for your support of Sonoma Clean Power and our communities!
