

ProFIT Program

Compensation for Renewable Generation

What is ProFIT?

ProFIT is what is known as a Feed-In Tariff, a renewable energy purchasing program which sets the rules and price for Sonoma Clean Power to purchase electricity from small-scale wholesale renewable electricity projects within SCP's service territory.

Summary

This program directly promotes the development of small-scale renewable generation installations within the Sonoma Clean Power service territory by creating a standard-offer transaction with a flat/fixed price of \$95/megawatt-hour (MWh). Contracts will be 10 years for baseload generating facilities or 20 years for other generating facilities. Projects that meet the bonus eligibility criteria may qualify for up to \$130/MWh for the initial 5 or 10 years of the contract term.

Eligibility Criteria

Projects must be:

- A new resource
- Small-scale (smaller than 1 megawatt)
- Located in SCP service territory
- California Renewable Portfolio Standard compliant
- Interconnected to the electricity grid
- Legally permitted by appropriate jurisdictional agency, and
- Willing to sign a standard, non-negotiable, long term contract.

Timing

Applications for participation will be available in early August. Program will be open until fully subscribed.
